Connect Raindancer to the Weenat-API

To link weather data from Weenat to Raindancer, you need an account with Weenat (https://weenat.com/).

Raindancer Portal instructions:

- Go to **Expert** mode (top right).

- The Weenat account must then be registered in Raindancer under **Settings > API > New API login details**.

- Select **Weenat API** under API type.
- Enter your Weenat login details (username and password).
- Save your changes.

> -Note: It may take more than 20 minutes for the first data to be synchronised.

- Navigate to **Measurements** in the top menu bar and select the **measurement Spot**.
- Click on the **New button** in the lower section and fill in the form (you can find a detailed description here).

- Then **save and close** the application.
