Create a Well

The term well refers to all water sources that are used for irrigation.

Managing one or more wells is particularly useful if you need to keep track of the quantities of water withdrawn.

What do I need to do?

1. In the raindancer portal at the top click on **Wells → Wells**
2. Click on the "**New Well**" button
3. Assign a Name
4. Set latitude/longitude.
   Note: If you are using the map to set latitude/longitude,
   please do not close the window with the **x-**symbol, as this would close the complete setup for create/edit the well and all your entries will be lost.
5. Select the volume or operating time for billing type
6. **OPTIONAL** Select a team if this option has been purchased
7. Click on "**Save**".

Detailed Information on the Inputs

Name

Enter the name for the well here.

Latitude / Longitude

Specify where the well is located. You can enter the coordinates manually. Otherwise, you can also use the map tool, which you can access by clicking on the "Map" button.

Accounting type

Here you specify the billing type for the well. You can choose between cubic metres (m^3) and hours (h).

Accounting identifier

Here you can give the well its own identifier apart from the name. This has the advantage that you have several wells with the same identifier and can later filter by exactly this identifier.

Permitted Quantity

Enter the maximum quantity that may be withdrawn from the well here. You will then see how much water has been taken and the maximum amount that may be withdrawn.

Remarks

Here you can leave important information for colleagues / employees.

Teams

Here you specify which teams have access to the well and which do not.
