Plan Future Operations

This section of the Raindancer portal is designed to enable you to plan your assignments in advance and thus bring more structure to your work dynamics.

You will find the operation scheduling in the portal on the left-hand side in the ribbon.

> Runs to your fields are required for planning operations. See also Create a Run

Plan New Operation

To plan a new deployment, navigate to the " **Operations Schedule**" item via the left-hand bar.

Click on the "**Operations Schedule**" area to access the overview of all planned operations. So that you can plan a new missions,

Click on the "**Plan a new mission**" button in the bottom right-hand corner.

Select the Field

A new screen will open in which you can select the field on which you plan your operation. If you have numerous fields, you can also search for a specific field by entering the name in the search bar.

Select your Irrigator

Once you have decided on a field, the next step is to select the irrigator you want to use on the field.

Once you have completed both steps, you will see the new planned application in your overview. By clicking on the application, you will be allowed to edit it in more detail. You can then change the irrigator, set or adjust the feed speed, specify the amount of water per mm, change the sequence and make a comment.

Print

You can print out all of the planned operations on paper. To do this, click on the "Print" button in the bottom left-hand corner. You will now see a print preview.

Delete

If you want to delete the operation, you can also do this in the operation overview. You will find the symbol of a recycling bin
